DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-5, 11, 22, 14-19^{and} 29 are rejected under 35 U.S.C. 102(e) as being anticipated by Munk et al. '182.

Munk discloses the claimed invention, including a keel guide having a landing feature, which holds a bushing mechanism. Wear insert(s) are provided as claimed.

3. Claims 1-8, 11-22, 25 and 28-31 are rejected under 35 U.S.C. 102(e) as being anticipated by Munk et al. '336.

Munk discloses the claimed invention for landing a riser joint within a keel guide. A plurality of clamp/lock down assemblies are provided to prevent linear movement of the joint through the keel guide.

4. Claims 9, 10, 23 and 24 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 3617

Munk et al. '344 and Davies et al. Discloses landing features.
